Name of Learner: **PYP 4** **Time Period: 3 April – 8 April**

Subject Focus: Mathematics **MHLE - 32**

Purpose: To apply the conceptual understanding finding area and perimeter.

Learning Outcome: Learners

- use standard metric units to solve real-life problems involving area and perimeter.

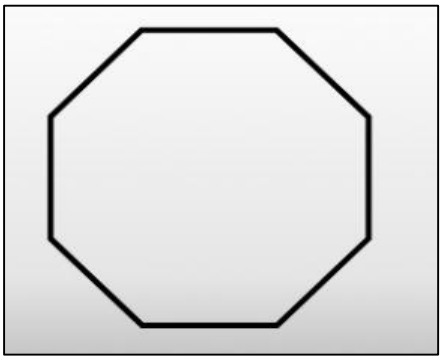

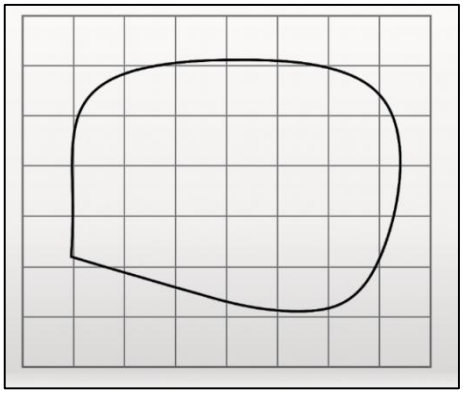

Area: Area tells us how much space the inside of a shape covers. Area is measured in square units (like square centimetres or square meters).

Perimeter: Perimeter tells us the distance all the way around the outside of a shape. Perimeter is measured in units (like centimetres or meters).

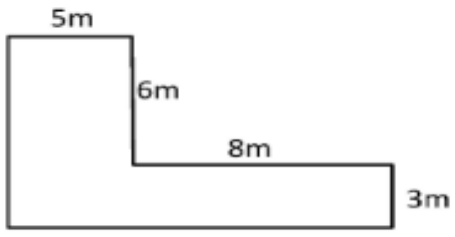

Must Do

Task 1: Answer the following.

1a) Find the side of this regular polygon if its perimeter is 40 cm.	1b) Find the area of the following irregular shape.
	
Side =	Area =

Task 2: Find the perimeter of the L shaped polygon.

Credits: Team PYP 4 Resources: m a t h - d r i l l s . c o m

Could do:

Task 3: Application of area and perimeter in real situations.

1)A square playground has sides that are 65 m long. What is the area of the playground?

2) Amit jogged four times around the park. If the perimeter of the park is 450 m, how far did he jog? Give your answer in km and m.

3) The length and breadth of a rectangular park is 200 m and 250 m respectively. If a person takes 5 rounds around the park, how much did he walk?

Enrichment Task:

A rectangular room has a length of 120 m and a breadth of 80 m. The floor is to be completely covered with square tiles of side 40 cm. Find the number of tiles required to cover the floor.
