Name of Learner: **PYP 4** **Time Period: 13 March -18 March**

Subject Focus: Mathematics **MHLE - 29**

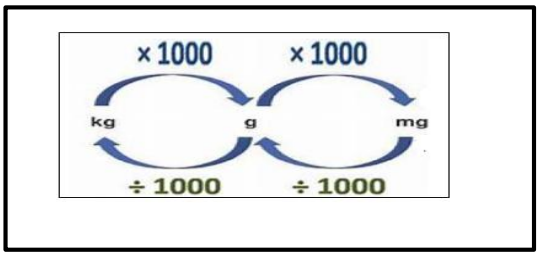

Purpose: To apply the conceptual understanding of fractions and measurement in real contexts.

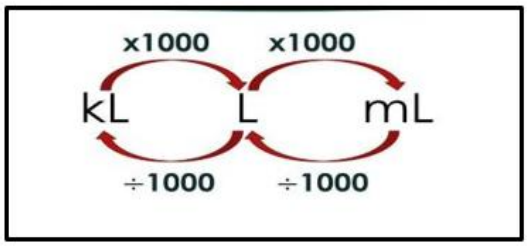

Learning Outcome: Learners

- select and use appropriate standard metric units for estimating, describing, comparing, and measuring weight and capacity.
- reduce fractions to their simplest form.

Must Do

Task 1: Convert the following units of measurement.

a)4 kg= gm	a)5 *l* = *ml*
b)12000 mg= gm	b)1000 *ml*= *l*
c)10000 gm= kg	c)13 *l*= *ml*
d)3 kg= mg	d)15000 *ml*= *l*
e)10 gm= mg	e)2000 *l*= *kl*

Task 2: Reduce the fractions to their lowest terms.

1) $\frac{28}{50}$ =	5) $\frac{32}{48}$ =	**Example:** To reduce 18/21 we divide both the numerator and denominator by their common factor. $\frac{18\div3}{21\div3}=\frac{6}{7}$
2) $\frac{8}{24}$ =	6) $\frac{36}{54}$ =	
3) $\frac{30}{54}$ =	7) $\frac{14}{56}$ =	
4) $\frac{18}{42}$ =	8) $\frac{18}{28}$ =	

Credits: Team PYP 4 Resources: Oxford Mathematics, homeschoolmath.net

Could do:

Task 3: Solve the following.

a) 40 *l* 300 *m*l + 12 *l* 985 *ml*	b) 2 *l* 200 *ml* –1 *l* 300 *ml*

Task 4: Compare fractions with <or >or = in the box.

1 a. $\frac{7}{11} \square \frac{6}{11}$	1 b. $\frac{1}{2} \square \frac{9}{9}$	1 c. $\frac{11}{6} \square \frac{1}{2}$
2 a. $\frac{1}{2} \square \frac{11}{2}$	2 b. $\frac{8}{2} \square \frac{8}{1}$	2 c. $\frac{8}{8} \square \frac{8}{12}$
3 a. $\frac{1}{10} \square \frac{8}{8}$	3 b. $\frac{1}{7} \square \frac{12}{7}$	3 c. $\frac{7}{7} \square \frac{12}{6}$

Task 5: Application of measurement in real situations.

A can of 14 *l* of oil was purchased for an event. After the event,6 *l* 325 *ml* of oil was left in the can. How much oil was used for the event?

Enrichment Task: A bottle of juice holds 900 *ml* of juice, can three such bottles be poured into a jar of 2900 *l*. Explain your answer with proper reasoning and show your thinking in the workspace provided.
